

## Methods in tropical reefs monitoring (7<sup>th</sup> Reef Check course at Bangka Island)

Bangka Island, north Sulawesi, Indonesia, 27 October – 04 November 2018

Reef Check Italia onlus, the Faculty of Fisheries and Marine Sciences of the Sam Ratulangi University (FFMS-USNRSAT), Manado, Indonesia and Coral Eye organise an international field course on coral reefs monitoring approaches opened to both marine biology students and diver volunteers from around the world. The course, taught in English, aims to:

- provide the basic knowledge for the identification of hard corals and their diseases
- present an overview on the well-established coral reefs monitoring approaches
- learn and apply different methods underwater, including Reef Check and Coral Watch protocols
- contribute to the monitoring and conservation of the coral reefs at the Bangka outpost

Lectures and seminars will be alternated with day and night dives, as well as practical sessions in the lab. At the end of the course it is expected that the participants demonstrate what they learned and discuss the results achieved. Participants will obtain the international tropical **EcoDiver certification** issued by the **Reef Check Foundation**.

### Participants

The number of participants is limited to 15. Although it is not required any scientific qualification, participants should be confident with the main groups of marine invertebrates and possibly have some experience in tropical dives. They should hold at least a 2nd level international dive certificate (allowing diving to 30 m depth), a minimum of documented 30 dives, a medical certificate allowing to safely dive (written in English, Italian or Bahasa Indonesia) and an international dive insurance (e.g., DAN, DiveAssure, AquaMed). Each participant must carry his/her own full diving equipment, except scuba tanks and weights, provided on site.

### Costs

**Course fee**, including teaching materials and Reef Check certificate, is **€ 200.00** and must be paid to **Reef Check Italia onlus** as a non-refundable deposit upon confirmation, either by PayPal (to postmaster@reefcheckitalia.it) or by bank transfer (to Reef Check Italia onlus, IBAN: IT08K031113319000000010004 BIC/SWIFT: BLOPIT22).

**Full board accommodation** (9 days/8 night) and **dives** cost **€ 800.00** and must be paid to the **Coral Eye** upon arrival. Soft drinks/beers and additional excursions are not included.

Moreover, a small donation to the Bangka Conservation Found (100,000 IDR ~ 7.00 Euros) will be required on site.

**Transfers from Manado to Bangka and return** is managed by Coral Eye and included in the accommodation costs. In order to properly organise transport from/to Bangka, every participant must arrive to Manado downtown or airport within 27th October 2018, at 9 o'clock, and leave from Manado airport not before than 4th November 2018, at 15 o'clock. Longer stay in Bangka must be agreed with Coral-Eye well in advance.

## Booking & Confirmation

Subject to availability, booking is available for every participant starting from 1<sup>st</sup> of March 2018 by sending the application form (available at [www.reefcheckitalia.it](http://www.reefcheckitalia.it)) and the required attachments by email to [postmaster@reefcheckitalia.it](mailto:postmaster@reefcheckitalia.it). Based on first come first served, only requests comprehensive of all requested documents and the non-refundable deposit fee will be confirmed.

## Course contents

This intensive course, at its 6th renewed edition, combines different aspects of coral reef conservation. It includes basic knowledge in corals identification and their diseases, the pollution risks and many approaches to coral reefs monitoring. In particular:

### Reef Check Tropical EcoDiver Program

The Reef Check EcoDiver program allows anyone with an interest in the ocean to learn more about tropical coral reefs. Reef Check combines **education** with **action** to give volunteers a unique experience while taking an active role in conserving the world's reefs. The EcoDiver program allows participants the rare opportunity to work with teams of scientists throughout the world to combat the crises affecting our reefs today. The world's reefs are changing fast, and it is up to us to ensure that reefs are around for future generations. Using the globally standardized scientific protocol, the Reef Check EcoDiver program collects valuable data to establish the status of coral reefs world-wide. The data are analysed and used

locally by marine park managers, nationally by fisheries and environment managers and internationally by organizations including **United Nations** agencies to help better track and care for coral reefs.

Become certified to conduct your own Reef Check surveys and take an active role in conserving your favourite coral reefs. This course is designed to teach you everything you need to know to conduct full scale Reef Check surveys. In this program you will learn all about the globally standardized Reef Check methodology as well as how to identify key indicator fish, invertebrates and substrates selected by Reef Check for global monitoring and conservation of coral reefs! This course will allow you to join the Reef Check monitoring team and assist in underwater surveys around the world.

Methods include substrate, fish and invertebrate transects coupled with a socio-economic survey.

Materials: Reef Check EcoDiver Kit for Indo-Pacific, including data board.

Testing and Certification: PowerPoint ID test (80% to pass) and field ID test (90%) to obtain regional certification. Certification qualifies holder to participate in Reef Check surveys in the region and to submit their data to the global database. More info: <http://reefcheck.org/ecodiver/about-ecodiver/>

## CoralWatch Protocol

CoralWatch is a citizen science project based at The University of Queensland, in Brisbane, Australia.

## Coral Finder Method

An underwater book to learn how identify hard corals and discover the huge species diversity in a coral reef. The answer to the question "What coral is that?" is in your head – literally. Your eyes and brain are the world's most powerful supercomputer capable of

CoralWatch helps non-scientists around the globe understand and support effective reef management by using engaging tools that provide people with accessible information and hands-on-experience collecting scientific data about the health of corals using the Coral Health Chart. This chart standardises changes in coral colours, and provides a simple way for people to quantify coral health and contribute to the CoralWatch global database. The Coral Health Chart is used by dive centres, scientists, school groups, and tourists.

Materials: underwater kit with Coral Health Chart and data board.

More info: <http://www.coralwatch.org>

solving complex visual problems instantly. Traditional field guides put text between you and the answer – and text needs to be interpreted. The Coral Finder reduces the problem of identifying corals to a series of simple visual choices. The Coral Finder makes coral identification practical and easy by using WYSIWYLF – What You See Is What You Look For! Instead of memorising thousands of images and names in your head you just look up the shape and the Coral Finder gives you a simple matrix of best bets to choose from. Simple – just the way we like it. The Coral Finder creates a choice matrix for easy, at-a-glance decision making.

Materials: underwater book (some copies are available for purchase).

## Teaching staff

### Prof. Massimo Ponti, benthic ecologist at the University of Bologna

Massimo is graduated in Environmental Science and has a PhD in Ecology. He is adjunct professor in Scientific Diving Methods and Marine Experimental Laboratory at the University of Bologna and adjunct professor in Marine Communities and Ecosystems at the University of Padoa (Italy) and in Quantitative methods in marine science at the Polytechnic University of Marche (Italy). He is the President of the Italian association of scientific divers, diving master instructor and Vice-President of the Reef Check Italy no-profit association. His research experiences range from temperate to tropical benthic ecology, mainly focusing on species diversity, habitat-species interactions, human disturbances, marine protected areas and biodiversity conservation.

### Prof. Leo Chan Lai, associate Director State Key Laboratory in Marine Pollution City University of Hong Kong

Visiting associate professor, Department of Biomedical Sciences, City University of Hong Kong; Deputy Secretary-General, Shenzhen Marine Innovative Research, Education and Industry Consortium; Director, Shenzhen Key Laboratory for Sustainable Use of Marine Biodiversity; Founder and President, Sea Dweller Union (SDU); Deputy Secretary-General, Shenzhen Marine Research and Technology Consortium (SMART); Deputy Director, Shenzhen Research Centre for the Oceans and Human Health (H2O); Chief Technical Advisor, State Key Laboratory of Marine Environmental Science (Xiamen University); Adjunct Professor, Xiamen University.

### Prof. Markus T. Lasut, marine biologist at the Sam Ratulangi University, Manado

Prof. Markus T. Lasut, marine biologist at the Sam Ratulangi University, Manado. Markus is graduated in Faculty of Fisheries at the Sam Ratulangi University (Indonesia) and Marine Science at the Aarhus University (Denmark). He received his Doctor of Technical Science (D.Tech.Sc) in Integrated Tropical Coastal Zone Management at the Asian Institute of Technology (Thailand). Today he is professor in the field of Marine Pollution Studies at the Faculty of Fisheries and Marine Sciences of the Sam Ratulangi University, Manado (Indonesia).

### Dr. Daisy Makapedua, marine biologist at the Sam Ratulangi University, Manado

Daisy is graduated in Faculty of Fisheries at the Sam Ratulangi University (Indonesia). She received her PhD in Italy. Today she is a researcher in the field of Marine Sciences at the Faculty of Fisheries and Marine Sciences of the Sam Ratulangi University, Manado (Indonesia). She largely contributed in discovery and study the Indonesian coelacanth *Latimeria menadoensis*. Her main research topics are zoology and physiology, including molecular studies.

### Dr. Gianfranco Rossi, marine biologist and Reef Check Tropical Trainer

Franco is graduated in Marine Biology with a thesis on "The involvement of Recreational Scuba divers in the Monitoring of Coastal Environment". Scuba Instructor. Author of the book "Le scogliere coralline" (The coral reefs). Seminars on Scleractinians ID (Coral Reef Builders) at DiSVA - Polytechnic University of Marche (Italy). He is expert in coral killing sponges. He is member of the steering board Reef Check Italy no-profit association.

### Dr. Eva Turicchia, marine biologist and environmental educator

Eva is a PhD student in Marine Biology at the University of Bologna, she is graduated in Environmental Science and Marine Biology at the University of Bologna. She is a scuba diving instructor since 2004, with several working experiences in Italy and abroad, Advanced European Scientific Diver and Reef Check coordinator. Her main interests are temperate and tropical benthic ecology, anthropogenic impact, and biological indices.

### Dr. Marco Segre Reinach, marine biologist and CORAL EYE manager

Marco has a degree in marine biology and oceanography. He developed a direct knowledge of the marine environment while sailing and diving for many years around the world, as crew of regatta and cruises boats. In 2009 after three years around Indonesia, Marco joined up the team, managing the start-up of Coral Eye outpost and after many years he still here...

### Preliminary schedule

Saturday	27/10/2018	morning	Participants arrivals (transport Manado - Bangka)
		afternoon	Check dive <sup>1</sup>
		evening	Course presentation and organisation
		after dinner	Introduction to hard corals
			Introduction to Reef Check method
Sunday	28/10/2018	morning	Reef Check method (Fish)
		afternoon	Fish identification (snorkeling) <sup>1</sup>
		evening	Reef Check method (Invertebrate)
		after dinner	Invertebrate identification (snorkeling) <sup>1</sup>
			Reef Check method (Substrate 1 <sup>st</sup> part)
			Coral Watch method
Monday	29/10/2018	morning	Reef Check method (Substrate 2 <sup>nd</sup> part)
		afternoon	Inter-calibration dive <sup>1</sup> & debriefing
		evening	Coral taxonomy: using the Coral Finder
		after dinner	1 <sup>st</sup> night dive (group A) <sup>1</sup>
			Seminar: North Sulawesi Ecology, Tourism impacts
Tuesday	30/10/2018	morning	1st & 2nd monitoring dives (Kinubuhutang garden & Kahuku)
		afternoon	Data entry & data analysis
		evening	1st night dive (group B) <sup>1</sup>
		after dinner	Seminar: Coral Ecosystems Disruptive Microalgae: Source, Distribution, Transfer and Threats
Wednesday	31/11/2018	morning	3 <sup>rd</sup> & 4 <sup>th</sup> monitoring dives (Gangga Village & Jetty)
		afternoon	Data entry (group A) - Coral Identification (group B) <sup>1</sup>
		evening	2 <sup>nd</sup> night dive (group A) <sup>1</sup>
		after dinner	Seminar: Monitoring programs & Coral Diseases
Thursday	01/11/2018	morning	5 <sup>th</sup> & 6 <sup>th</sup> monitoring dives (Tanjung Husi II & Bisabora Timur)
		afternoon	Data entry (group B) - Coral Identification (group A) <sup>1</sup>
		evening	2nd night dive (group B) <sup>1</sup>
		after dinner	Reef Check exams (1 <sup>st</sup> part)
Friday	02/11/2018	morning	1 <sup>st</sup> & 2 <sup>nd</sup> Leisure dives
		afternoon	Group picture
		evening	Mangrove exploration (snorkeling)
		after dinner	Reef Check exams (2 <sup>nd</sup> part)
			Preparation of student presentations
Saturday	03/11/2018	morning	3 <sup>rd</sup> & <b>Coral restoration</b>
		afternoon	Seminar: Scientific discoveries in North Sulawesi
		evening	Student presentations
			Beach party
Sunday	04/11/2018	morning	Delivery of diplomas
			Departures

The activities at sea are indicated in blue

<sup>1</sup> House reef at Coral Eye

Note: program can be changed according to weather conditions, leisure dives may be converted in monitoring/sampling dives whenever need.

**Reef Check Italia – onlus**
